ABSTRACT

Distracted Driver Detection is a systematic approach for identifying and analyzing patterns and alert the driver if he going through any distraction.

Our system can predict the driver's action and alert this if he is doing other works than driving . Using the concept of machine learning we can extract previously known , useful information from a structured data.

ACKNOWLEDGEMENT

We are truly humbling to have successfully completed 'Distraction Driver Detection' as an academic project as a part of the curriculum of Visvesvaraya Technological University,Belgaum.

This project is made under the guidance of **Mr. Joseph Jerald**, **Assistant Professor**, in the Department of Information Science and Engineering. We would like to express my sincere gratitude to our guide for all the helping hand and guidance in this project.

We would like to thank our project coordinator **Mr. Narendra UP,** Assistant Professor in the Department of Information Science and Engineering, for his cordial support, valuable information and guidance, which helped us in completing this project through the various stages.

We would like to express appreciation to **Mr. Manjunath H** Head of Department, Department of Information Science and Engineering, for his support and guidance.

We would like to thank our Principal **Dr. G.L. Easwara Prasad**, for encouraging us and giving us an opportunity to accomplish the project.

We also thank our management who helped us directly or indirectly in the completion of this project.

Our special thanks to faculty members and others for their constant help and support.

Above all, we extend our sincere gratitude to our parents and friends for their constant encouragement with moral support.
